AB - J58052375 Ink compsn. comprises edible colourant (1-10 wt.% for synthetic colourant and 5-50 wt.% for natural colourant), shellac resin (1-20 wt.%) and a solvent comprising 95-75 wt.% ethyl alcohol and 5-25 wt.% H₂O.

- The colourant is typically synthetic colourant used for additives to be added into edible materials and which has high solubility in ethyl alcohol; dispersible lake opt. combined with an ethyl alcohol-soluble dye or natural colourant which is soluble in ethyl alcohol (e.g. Monascus, kurchicine, crocin or fruits of Gardenia jasminoides Ellis. Ethyl alcohol is fermentated edible alcohol or alcohol modified by flavour for foods.

- The ink compsn. marked on a moistened food does not bleed and forms well defined images. When the image is contacted with water prior to the complete drying of the ink compsn. the ink is not spreaded or dissolved in water.
